Atlantic.Net Virtual Private Cloud (VPC) enables you to have complete logical isolation on a virtual network using the Atlantic.Net Cloud. VPC is like a physical network that you would see in a data center; however, it completely resides on Atlantic.Net's Cloud services and is 100% logically separated from other VPCs in the Atlantic.Net Cloud. This allows you to have a secure and compliant network while adding all the features of cloud-like scalability.

**ATLANTIC.NET VPC BENEFITS**

**Security and Compliance**
By logically segmenting your network from all other networks in the Atlantic.Net Cloud, Atlantic.Net VPC helps secure your environment for today’s unique compliance requirements, such as HIPAA, HITECH, PCI, SOC, NIST, etc.

**Managed**
Atlantic.Net completely manages your VPC network and builds it to fit the model you require. Our Security Operations Center (SOC) team works extensively with you and your team to determine the proper setup for your environment while making sure it fits with your organization's compliance needs.

**In the Atlantic.Net Cloud**
Atlantic.Net VPC allows you to keep all the redundancy, performance, and scalability of the Atlantic.Net Cloud while adding the security to pass and exceed the compliance standards your organization must adhere to.
ATLANTIC.NET SECURE VIRTUAL PRIVATE CLOUD

ATLANTIC.NET VPC FEATURES

Firewall
Restrict access to your servers with the Atlantic.Net Managed Firewall.

VPN
Securely connect to your Atlantic.Net VPC on a smartphone, computer, office, etc. via Atlantic.Net’s VPN.

Intrusion Prevention Service
Atlantic.Net’s Intrusion Prevention Service analyzes network traffic flows and blocks the malicious security threats from coming into your VPC.

Logging
Atlantic.Net captures network traffic going in and out of your VPC and integrates this into an easy-to-read report.

Load Balancing

BGP Routing
Enable Border Gateway Protocol (BGP) to your VPN and route your own IP ranges to Atlantic.Net’s Cloud infrastructure.

Private Routing
Connect between other cloud servers without the need for an external IP address.

VPC to VPC
Connect your VPC network across other projects or even other companies (upon request) with secure VPN tunnels.
We can easily customize the network configurations on your Atlantic.Net VPC. Below are some popular use cases with VPC; however, Atlantic.Net VPC is not limited to this. Please consult your Atlantic.Net sales representative to consult on all available options.

**Atlantic.Net VPC with Managed Firewall**

In this scenario, the Firewall NATs a public IP address to the private IP address on the server. By default, all ports on the firewall are closed. To open a port, a request needs to be made to our SOC team detailing the specific port to open. For example, you may be running a web server, and you would need to open port 443 to allow HTTPS traffic to flow through.

**Atlantic.Net VPC with VPN and NAT**

In this scenario, we have the same functionality as the VPC with the Atlantic.Net Managed Firewall, but with the addition of a secure virtual private network (VPN) from your network. This gives your company's system admins, developers, and other authorized personnel a secure way of accessing the environment. Atlantic.Net uses IPsec and OpenVPN to connect, and we can connect our firewall to your firewall or our firewall to your device. Public IPs still NAT to private IPs, and ports can still be opened and closed.
**Atlantic.Net VPC with VPN without NAT**

Like Atlantic.Net’s VPC with VPN and NAT, we can create a secure tunnel from your corporate network to the Atlantic.Net cloud infrastructure. Additionally, we can completely segment off the public network to the cloud servers. This creates a complete extension of your network into the VPC.

**Atlantic.Net VPC with Load Balancing**

In this scenario, we have added load balancing to the VPC. With load balancing, incoming traffic can be distributed across multiple Atlantic.Net Cloud servers. This creates better performance and additional redundancy.
Atlantic.Net VPC with Replication

In this scenario, we have added replication to another site with VPC for redundancy purposes. This creates a hot copy of your server to a completely different facility. In a disaster event, we can fail everything over from one facility to the next.

Find Out More?

Atlantic.Net stands ready to help you attain fast compliance with a range of certifications, such as SOC 2 and SOC 3, HIPAA, and HITECH, all with 24x7x365 support, monitoring, and world-class data center infrastructure. For faster application deployment, free IT architecture design, and assessment, visit us at www.atlantic.net, call 888-618-DATA (3282), or email us at sales@atlantic.net.
